www.**BowmanRanchND**.com

Cattlemen,

Bowman Ranch invites you to our 2024 production sale, February 8th, at the ranch 1 mile south of Rhame, ND. We are extremely excited about this year's offering and feel that the quality runs deep. The 43 bulls selling are selected from the top 55% of our calf crop. The bulls are thick, deep sided, and have as good of disposition as you'll find. We are also excited to offer, for the first time in our annual production sale, 20 commercial angus replacement heifer calves.

We are in some exciting times in the cattle business. We saw record high prices for feeders in the fall and bred cows and weigh ups remain strong as we enter winter. I am optimistic that high prices are going to stick around for a few years making it a great time to invest in the future of your operation.

We want to thank all of our past customers for your support of our operation and look forward to welcoming new ones. We know that there are many places to source your angus genetics. We sincerely appreciate you considering us. We value the relationships we have developed with each of you. We would love to show you the bulls prior to sale day and would encourage you to do so. We look forward to visiting with each of you.

Please join us for lunch beginning at 11:30 am on sale day Thursday, February 8, 2024.

Sincerely,

Eric & Andrea Bowman and Family

BOWMAN RANCH

SALE DAY PHONES:

ERIC BOWMAN.....(701) 440-0278
 ANDREA BOWMAN.....(701) 523-6239
 DILLON BOWMAN.....(701) 440-9774

SALE LOCATION: At the ranch one mile south of Rhame, ND in the shop on the north driveway.

SALE FORMAT: We will once again be hosting a video auction bull sale. Scott Weishaar will serve as our auctioneer. We want everyone to be aware that bulls will not go through a sale ring. A video of each bull will be playing on a screen while he is selling. Bidding will also be available online through The Livestock Link. Sale bulls will be penned nearby our sale facility for easy viewing. Please allow yourself adequate time to inspect the bulls prior to the sale. We will be happy to assist you in any way we can. You are welcome to view the bulls anytime prior to the sale at the ranch.

VIDEOS AND ONLINE BIDDING:

The Livestock Link will offer online bidding for our sale if you are unable to attend. Videos of the bulls will be available for viewing on their website: www.thelivestocklink.com. **If you are planning on bidding online, please be sure to register at www.thelivestocklink.com 24 hours in advance of the sale.**

AUCTIONEER:

Scott Weishaar, home.....701-872-5299
 Cell.....701-426-6826

DELIVERY: Bowman Ranch will deliver bulls for free within 300 miles of Rhame beginning April 1, 2024. We will feed the commercial heifers for up to a week after the sale. Trucking on them will be the buyer's responsibility

LIABILITY: All persons who attend the sale do so at their own risk. Bowman Ranch assumes no liability for accidents or injuries that occur on the sale premises.

GENETIC TESTING: The bulls have once again been DNA tested and parent verified with the Zoetis HD50K test. Genomic enhanced EPDs increase the accuracy of each EPD and we feel it is a worthy investment.

BULL DEVELOPMENT: Bulls are developed on a high roughage ration right here on the ranch. The ration consists of chopped grass, alfalfa, and barley hay, rolled corn, distillers grain, and a vitamin-mineral supplement. We target around 3 pounds of daily gain to ensure a bull ready to go to work breeding cows.

BREEDING SOUNDNESS: Each bull will have passed a breeding soundness exam performed by Fallon County Vet Service prior to delivery.

HERD HEALTH: All bulls were vaccinated with InForce 3 and Vision 7 in the spring of 2023. At preconditioning they received BoviShield One Shot and Vision 7 Somnous. Bovishield Gold 5 and Vision 7 Somnous were boosted at weaning. In the feedlot, bulls were vaccinated with Fusoguard for footrot, wormed with Safe Guard, and poured for lice with Clean Up II. All bulls selling are free of any known genetic defects and have tested negative for BVD.

Thank you 2023 4-H Market Sale Buyers

Dillon's steer: Bowman Grain; Dillon's pig: Spruce Hill Meats
 Gray's steer: West Plains Inc.; Gray's pig: Pro Point
 Liv's steer: Lazy C Cross Ranch & Bachmeier Chiropractic
 Showing chickens in round robin was a highlight of the fair, especially for Liv.

What our data tells you. . .

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus.

PRODUCTION EPDS

CALVING EASE DIRECT (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

BIRTH WEIGHT EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

WEANING WEIGHT EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

YEARLING WEIGHT EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

SCROTAL CIRCUMFERENCE EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

MATERNAL EPDS

MATERNAL MILK EPD (MILK), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

MANAGEMENT EPDS

DOCILITY (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

CLAW SET EPD (CLAW), is expressed in units of claw-set score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal claw set. The ideal claw set is toes that are symmetrical, even and appropriately spaced.

FOOT ANGLE EPD (ANGLE), is expressed in units of foot-angle score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal foot angle. The ideal is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

\$VALUE INDEXES

\$Value indexes, an economic selection index allows multiple change in several different traits at once pertaining to a specific breeding objective. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if the sires were randomly mated to cows and if calves were exposed to the same environment. Maternal Weaned

CALF VALUE (\$M), an index, expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

WEANED CALF VALUE (\$W), an index, expressed in dollars per head, to predict profitability differences in progeny due to genetics from birth to weaning. The underlying objective being producers will retain 20% of the female progeny as replacements and sell the rest of the cull females and their male counterparts as feeder calves. Traits included are as follows (in no particular order): birth weight, weaning weight, milk, and mature cow weight.

BEEF VALUE (\$B), a terminal index, expressed in dollars per carcass, to predict profitability differences in progeny due to genetics for postweaning and carcass traits. This terminal index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a carcass grid. Traits included in the index are as follows: yearling weight, dry-matter intake, marbling, carcass weight, ribeye area and fat. Source: AAA

Footnote

CARCASS EPDS

MARBLING EPD (MARB), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

RIBEYE AREA EPD (REA), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Lot 1 is Dillon's bull. He is as thick, deep, and easy fleshing as any bull we have to offer and has been a stand out since birth. His mother is a pretty Payweight daughter who did a fantastic job with her first calf. He also has some of the best carcass EPD's in the sale. Definite herd bull potential.

4	2.1	72	128	0.95	32	29	0.7	0.41	0.29	0.38	74	68	150

Lot 20 is a larger framed Coalition out of a perfect uddered Stellar daughter. He ranks high in WW, DOC, and foot quality.

We continue to focus on the mother cow. Making it through tough conditions makes a quality mother cow that possesses all the convenience traits, more important than ever. We don't have time to deal with bad dispositions, poor udders, or tough-doing cows. We are a family operation and provide all the day-to-day labor. We demand that each cow earns her keep. They have to maintain a sensible frame score, be structurally sound, easy to handle, and have an acceptable udder, while weaning a heavy calf and breeding back on time each year.

Cows aren't given a second chance here. They have to perform every year. Our registered herd is treated exactly the same as our commercial herd. They survive and thrive on limited resources on a 100% forage diet. We strive to graze our cowherd 8.5-9 months of the year and will go 10 months, if the forage is there and the winter allows it. We then supplement home-grown hay and a dry mineral supplement. We do not creep feed any of our registered calves, as we feel we can't properly evaluate our cowherd if creep is provided. These bulls have to do it on mother's milk and what Mother Nature provides on SW North Dakota grass.

All animals selling were born and raised right here on the ranch. Every registered calf is weighed on a digital scale within 24 hours of birth. In April, they get their first round of vaccinations followed by another round at preconditioning in September and boosters at weaning in October. Weaning weights were taken September 5th, which we used to calculate adjusted 205 day weights. This is done so we can ratio the bulls with the ones that get banded at that time. Actual weaning weights were taken on the bulls when they were weaned on October 12.

After weaning bulls are placed in the feedlot here on the ranch. Bulls are fed a high roughage ration consisting of chopped grass, alfalfa, and barley hay, corn, dry distillers, and a vitamin/mineral supplement. I personally feed and evaluate them each and every day. We target around 3 pounds of daily gain leading up to the sale.
