

Durbin Creek Ranch

Cattle for Commercial Cowmen

From Commercial Cowmen

The Agar Family

First Annual Live Bull Sale

Monday, February 18, 2013

Worland, Wyoming

45 Elite Range Ready 2-Year-Old Hereford Bulls

Fellow Cattlemen,

Once again we would like to welcome you to the Durbin Creek Program and thank you for taking the time to look the bulls over. We would also like to thank our previous customers, you made it a year we will not soon forget. The Lord has truly blessed us with good friends, family and cattle.

Though our sale process may have changed, the program has not. It is quite simple; every cow pays her way, every year in a problem free way. . . Period. There are no excuses, no frills, no gimmicks and absolutely no second chances. The cows summer at 8000 feet in a commercial setting and winter at 5500 feet on forage. This allows us to focus on the ever important economic traits. We can not afford diminished calf crops, low conception rates or poor production and carcass traits. Like you, the cattle business is our lively hood, the cattle must perform.

The bulls are as uniformed of a set of bulls as we have ever produced. They are deep, soggy, economical and masculine. They will add performance to your calf crop, while moderating the mature cowherd and adding fleshing ability. They are truly a set of bulls for the commercial cowman from commercial cowmen.

God Bless,
Wyatt Agar & Family

Jake & Hannah, Joey, Wyatt &
Cooper

Durbin Creek Ranch Annual Bull Sale

Monday, February 18, 2013

Worland Livestock Auction 1:00 pm

1310 Lane 12, Worland WY

Sale Day Phone Numbers

Worland Livestock Auction: (307) 347-9201

Wyatt Agar cell: (541) 709-0232

Bruce Agar cell: (307) 921-3021

Jake Agar cell: (541) 519-5366

We would love it if you would
join us

**Sunday, February 17 for our
Pre-Sale Dinner at the Worland
Livestock Auction
6:00 pm**

**Bulls will be available for viewing all day
Sunday and Monday morning.**

For questions or information please contact Wyatt Agar (307) 867-2404 or
email at durbincreekranch@yahoo.com

Sale Location: The sale will be held at the Worland Livestock Auction located at 1310 Lane 12. See map for further directions.

Terms & Conditions: Terms of the sale are cash or check. Every animal will be sold to the highest bidder. Each animal becomes the property of the buyer directly after the animal has been sold.

Guarantee: All cattle are, to the best of our knowledge, free from any disease or defect. All cattle are guaranteed breeders and have passed an extensive breeding soundness test. If an animal fails to breed after a six month trial period, it may be returned to the seller in good condition. The seller reserves the right to try said animal for 90 days, and if it proves to be a breeder, return it to buyer at buyer's expense. If the animal proves to be a non-breeder an animal of comparable value will be substituted to the buyer. No adjustments will be made after nine months.

Delivery: Free delivery to central locations in the Wyoming area. For buyers from Oregon, Idaho, Washington and Nevada, bulls will be hauled to Huntington, Oregon where buyers can pick them up or make other arrangements.

Development: Bulls are run in a commercial environment beside their mother on native forage until weaning. After weaning they are developed on hay and forage pellets through the winter, and then returned to forage as yearlings

Liability: All persons who attend the sale do so at their own risk, and the owners and sale barn assume no liability.

A true curve bender and a bull that does it all! Light birth weights, explosive growth, great feedlot data, and beautiful, economic females. Extremely consistent in the type and kind that he sires. Birth ratio of 97, weaning ratio of 102 on over 100 head of progeny. Dam at 9 years old has a weaning ratio of 109.

Bruce and Mary at cow camp

Lot 1

“Sunny”

One of the most important tools on DCR is our Stock Dogs. We use them everyday in this big county and breed them to have a lot of natural instincts. Sunny is a nice border collie female who is started on basic commands. She was bred and raised on DCR and out of proven parents.

The next generation of economics! One of the best we have produced. This bull is as deep ribbed and big middled as they get. He pasture bred 50 head of commercial cows this year, so we will have a large test group out of him. When we talk about cow power at DCR, the Floras are at the top of the list. 1015 is still in production at 12 and the grand dam, 5035 produced until she was 13. We used a full brother heavily this year and a sister has a weanig ratio of 109. Better than breed average on 9 traits and all 4 indexes. We will be retaining a 1/3 interest in this bull.

A huge performing bull that will sire calves that mash down the scales. Yet his females should retain that real feminine, easy doing, range cow look. The Diana's are our best cow family. His momma, at 11 has a weaning ratio of 104, grand dam 5036 was in production until she was 16 with a weaning ratio of 103. The udder quality in this cow family is second to none. We will retain a 1/3 interest.

Everybody in good spirits
when the last branding of the
year was done.

Power of the Baldy Cow

Reprint from August 2009 issue of The White Face.

Using Hereford bulls on Angus based cows will give producers advantages in profitability, cash flow, herd size and retained females fertility and longevity according to a recently completed study at Circle A Angus Ranch. In fact, when the data were further analyzed for economic emphasis, the results showed an advantage of \$514 net per cow over a period of 10 years. That's a \$51 difference per cow per year!

Economic models also predicted that if replacement females are retained over a period of 10 years, Hereford sired females will generate a 20% advantage in herd size for the same relative cost versus the straight Angus commercial cows because of increased fertility and longevity.

The study, conducted by Circle A Ranch headquartered in Iberia Mo., in cooperation with the American Hereford Association was started in 2007. Mark Akin, Circle A Ranch manager says, "The female side was what really peaked my interest, because we've bred purebred Angus for all these years, and I was curious if the heterosis from the cross would make available a better conception rate for us, and it did."

To start the project, Circle A Ranch AI bred 600 commercial Angus cows to 10 Hereford bulls with the goal of comparing the best of its Angus to the best of the Hereford-Angus cross. The control group included progeny from three proven Angus sires. The average EPD's of the Angus sires would place them in the top 30% of the Angus breed for birth weight and the top 20% of the breed for weaning weight. All the cows and the resulting calves were commingled and managed the same.

Data were collected by Circle A staff and interpreted by Dan Moser, Kansas State University associate professor of genetics, and Vern Pierce, University of Missouri associate professor of agricultural economics.

The Hereford cross calves showed the advantage from birth. Average birth weight for the Hereford sired calves was 72 lbs., 3lbs. heavier than the Angus sires, but still desirable and nearly ideal for commercial operations, according to Moser.

At weaning the Hereford sired calves were 11.9 lbs. heavier than the Angus sired calves, despite the Angus sires ranking in the top 20% of the breed for weaning weight EPD.

After being weaned, a portion of the steers were fed at Circle A's feedlot in Huntsville, Mo., where the Hereford sired steers outgained the Angus by about .15 lbs. per day.

While both breed groups were similar for fat thickness (Angus =0.52; Hereford =0.54), the Hereford sired steers had 13 lbs. more of carcass weight and about $\frac{3}{4}$ of an inch more ribeye area.

Heifer calves were developed and bred at Circle A's Lineville, Iowa, ranch. The Hereford sired heifers showed their prowess as productive females by boasting a 7% advantage in conception rate over the Angus heifers.

Seventy-five of the bred heifers were sold at the Circle A's annual production sale and averaged \$110 more per head than the commercial Angus Counterparts.

Maternal traits and the effect on birth and weaning weights of the calves will continue to be measured as the retained heifers calve and rebreed.

Although difficult to measure, Circle A staff members say they were impressed with the baldies' quiet, easy to handle disposition as well.

Pierce evaluated the performance differences between the Hereford and Angus sire groups including birth, weaning and feedlot growth and carcass data on the steer calves and pregnancy rates from the female progeny of the sire groups. He developed an economic model projecting the added value of the Hereford heterosis over a 10 year period.

He says, "the bottom line is if a rancher with Angus based cows uses Hereford bulls compared to Angus bulls and gets the same results that we had in the study, he will have improved cash flow, increased herd size and more calves to sell over a 10 year period."

What the Baldy Cow can offer you

- A 7% advantage in conception rate
- \$51 more per cow per year
- Improve disposition and handling ability
- Increase value of females

Data from the Circle A Ranch Heterosis Project begun in 2007 and conducted by Circle A Angus Ranch

- Consulting Services

For Durbin Creek Customers

" For many years now we have fed Durbin Creek Ranch's home raised cattle. Whether as calves or yearlings the cattle gain and perform. Sunshine and mild weather to cold and snowy winters, the cattle always convert their feed in the top percentile, compared to all the cattle at all of our operations."
