

Fawcett's Elm Creek Ranch

ANNUAL PRODUCTION SALE

Monday, February 12th, 2018 • 1 p.m. cst • at the ranch, Ree Heights, South Dakota

Fawcett's Elm Creek Ranch

HEREFORD & ANGUS GENETICS

Yearling commercial and registered Hereford heifers are for sale privately. Let us know if you are looking for a few registered replacements or even a load of commercials as we have them both.

We have been offering our bred heifers for sale privately in the fall. If you have interest in these females and would like to be contacted next fall let us know.

HEREFORD & ANGUS GENETICS

Selling

Lots 1-56 Yearling Hereford Bulls

Lots 58-63 Yearling Angus Bulls

Lots 64-102 2-Year-Old Hereford Bulls

Lots 103-108 2-Year-Old Angus Bulls

Lots 109 - 116 (10 head per Lot) F1 replacement type females

Welcome

Welcome to Fawcett's Elm Creek Ranch!

Welcome to our annual production sale here at the ranch and thank you to all of our past customers and those of you that are taking the time to consider what we have to offer.

Our customers have continued to send reports of their feeder cattle sired by FECR bulls topping their local markets at sale barns across the region. It is without a doubt that a consistent set of feeder cattle that are long bodied, rugged and have the genetic package to perform will get you to the top of the market where ever you are from. FECR strives to offer the type of bulls to meet your demands whether it be feeder cattle right off the cow, backgrounded cattle, or if you retain ownership all the way to the finish, and at the same time be able to produce females that are elite mothers and have tremendous longevity. We are continuously on the search for the most elite herd bulls in the country to bring here to be able to offer our customers the best genetics in the business while working with our customers in some cases to utilize some of our best bulls that we sell. Beef is at the highest demand ever on a global spectrum and prices are maintaining with slight increase sparking great optimism and upward momentum.

Throughout the catalog you will find a very uniform set of cattle. Extensive AI has given you the opportunity to select from many half and $\frac{3}{4}$ brothers and we feel this is a great way for you to add consistency to your calf crop.

We calve two groups of cows: the first starting February 1 – mid March and the second group starting the end of March. The yearling bulls are selected out of the first group of cows and the two year old bulls are the result of the second group of cows. Therefore the 2-year-olds are NOT "leftovers". They are the cream of a different crop and there are elite herd bulls in this group as well.

Finally, the most important thing here at the ranch is family. 2017 brought us several changes as Erin and Adam moved to Seattle to start a new chapter (don't ask me what she does as I'm still unsure), Hollis and Ivy are able to spend a great deal more time getting to take in all that the ranch and immediate family have to offer, and the biggest news came this fall as we were told that Kris and Weston are expecting a baby this spring!

Sincerely,

Dan Fawcett & the entire team here at FECR

VOLUME DISCOUNT

Bulls 3% on three head; 4% on four head;
5% on five or more.

HERD HEALTH

All sale cattle are in excellent health and have been poured with Ivomec. The coming two-year-old bulls are virgins, have been semen tested and scrotal measured. The bred heifers have had all pre-breeding shots as well as two scour (guardian) shots. They were ultrasounded and have been reexamined to be safe in calf. Prairie View Veterinary Clinic, Miller, SD will handle all health requirements on the cattle.

BREEDING GURANTEE

All bulls will be guaranteed through first 60 day breeding season. In the event, an animal fails to breed, a suitable replacement will be made or credit will be given in the next sale. The bred heifers are safe in calf and thus will be considered a breeder at time of sale, no further guarantee will apply.

TERMS & CONDITIONS

This will be a video auction. All animals will be penned outside. All animals will sell to the highest bidder with the auctioneer settling any disputes as to bids. Announced changes in catalog information will take precedence over any printed material in catalog. The animals become the property of the highest bidder as soon as sold and will be cared for, for a reasonable time, at buyer's risk. Any person attending this sale does so at their own risk.

PEDIGREE

All registered animals in the sale are clean of any genetic defect to the best of our knowledge. All potential genetic defect carriers have been DNA'd and will have a profile on file with the AHA. The registered bred heifers have been DNA'd and will be pro- filed for ET permits.

RETAINED OWNERSHIPS

We will retain a percentage of several of the bulls and the registered heifers. Terms will be announced sale day.

ABSENTEE BIDS

Any person unable to attend can place a bid through Keith or Daniel or any of the listed sale representatives. Please have credit references available.

DELIVERY

Free delivery on bulls to any one location within a 300 mile radius if delivered by Fawcett's Elm Creek Ranch. We will cooperate on deliveries outside that area. Day of Sale receive \$50 credit on any bull hauled that day.

Annual Production Sale

CONFERENCE CALL BIDDING

We are offering conference call bidding on sale day. Pre-register to bid: Please call Art Handel at 605-391-8233 prior to sale day to register for a buyer number. (You may call several days in advance to pre-register). To register on sale day call 605-244-9066 between the hours of 10 and 12 (Central Time). All conference call bidders must be approved by 11:00 in order to bid. The conference call number on sale day for bidding is 605-244-9066, password code when prompted: 21368.

CONFERENCE CALL INSTRUCTIONS

Absentee bidders who wish to use the Conference Call Line may do so by calling 605-244-9066. When prompted dial in the Conference ID: 21368. Pre-register to bid: Please call Art Handel at 605-391-8233 prior to sale day to register for a buyer number. (You may call several days in advance to pre-register). To register on sale day call 605-244-9066 between the hours of 10 and 12 (Central Time). All Conference Call Bidders must be approved by 12:00 in order to bid. The conference call number on sale day for bidding is 605-244-9066, password code when prompted: 21368.

This sale will be broadcast live on the internet.

Sale catalog and ad designs for Fawcett's Elm Creek Ranch Annual Production Sale were proudly done by Focus Marketing Group, Inc., www.focusmarketinggroup.net

The Hereford Advantage: IT ALL ADDS UP

Herefords are practical, profitable and reliable cattle. Known as the efficiency experts, Herefords have been an industry icon for more than 100 years. Today the beef industry faces more challenges than ever, and the Hereford breed is helping producers meet those challenges head-on.

Herefords reduce input costs. Along with excellent feed conversion, Herefords offer hardiness, fertility, longevity and a gentle disposition.

Herefords boost crossbreeding programs. Whiteface crosses pack extra hybrid kick. Three large-scale, real-world research projects at Lacey Livestock/Harris Ranch, Circle A Ranch and Simplot Livestock Co. have documented the Hereford-sired advantage.

PROFITABULL: The True Profit Driver

A registered Hereford bull pays in so many ways. Today you can count on registered Hereford bulls to deliver more genetic technology and predictability than any other breed.

It is difficult to improve those things you cannot measure; therefore, in 2001 AHA implemented a Whole Herd Total Performance Records (TPR[™]) Program to measure production traits as well as other economic traits such as fertility, longevity and reproductive efficiency.

Hereford breeders continue to go above the status quo and submit ultrasound data, body condition scores, cow weights and disposition scores, which all add to the integrity and accuracy of the AHA database. Because of Hereford breeders' commitment, the AHA has developed the single largest database for cow fertility and productivity in the world. This database has positioned the breed as a champion of cow productivity and has led to the development of new expected progeny differences (EPDs) such as udder suspension, teat size, sustained cow fertility and heifer calving rate.

In recent years Hereford breeders have also made a commitment to collecting and submitting DNA samples. In 2012 genomic-enhanced EPDs were released, which add even more predictive power to Hereford genetics.

Calves sired by Hereford bulls have a \$30 per head documented advantage in feedlot profitability and a 7% advantage in fertility when compared to Angus-sired calves. These advantages were documented during a three-year, real-world commercial heterosis project at Lacey Livestock/Harris Ranch comparing progeny by Hereford and Angus bulls when crossed on Angus-based cows.

Another project with Simplot Livestock Co. proved low-birth-weight Hereford bulls stacked up to Angus heifer bulls in calving ease when bred to Angus first-calf heifers.

Lorna Marshall, Genex U.S. beef marketing manager, says, "For the last 10 years, the Hereford breed has been on a mission to become really commercially relevant."

She explains that Hereford is experiencing some amazing times. Hereford bull sales are at record prices, and it's a fun time to be a Hereford breeder and to own Hereford cows.

"Today it's really fun for me to go sell Hereford semen, because I have a plethora of bulls in my lineup that are calving ease bulls that are high accuracy that represent a lot of different pedigrees and can do a lot of powerful things for commercial producers."

The Hereford Momma: The Cadillac of Females

There's nothing better than a Hereford-sired momma. Whether she is purebred or crossbred, the Hereford-influenced momma is the best in the pasture.

This is not your grandpa's Hereford. After years of selection pressure, today's Hereford female is one you can trust. She's got the maternal advantage producers can count on to add longevity and productivity to their herds.

Hereford-sired mommas offer some of the best features in the industry:

- Fertility
- Longevity
- Adaptability
- Improved herd health
- Better performance (pounds of calf weaned)

The cheapest and most profitable technology available to cattle producers is maternal heterosis. The Circle A Ranch and Lacey Livestock/Harris Ranch research projects both documented a maternal advantage of 7% higher pregnancy rate when comparing the Hereford-sired females to Angus-sired females. Data from Circle A also prove a net income of \$51 more per cow per year and a significantly higher selling price for bred heifers.

"As range cows go, I think the Hereford female is a superior range cow and makes a great mother," says Mark Lacey, Lacey Livestock, Independence, Calif.

Heterosis advantage

Dr. Randall Raymond, veterinarian and Simplot Livestock Co. director of research and veterinary services, says the Hereford advantage is in maternal heterosis.

"In a cow-calf operation there is a 4.3% increase in pregnancy rate due to maternal heterosis," Raymond says. "That's a big deal. The single biggest expense to a commercial cow-calf operation is retention of heifers. Because it costs a lot to make her, and every heifer you keep is a calf you can't feed or sell at weaning."

Heterosis also contributes to 4.2 lb. of birth weight, 18 lb. of pre-weaning gain and 35 lb. of carcass weight, Raymond explains. Heterosis also contributes 4% less pre-weaning mortality. It also means about 20 lb. more weaning weight just because of heterosis.

Raymond also praises Herefords for their feed efficiency, moderation in milk, female longevity, phenotypic markers (whiteface), docility, maternal versatility and fleshing ability.

Unquestionable disposition

There's no place for high-headed cattle that tear up equipment or cause injuries. Herefords are known for their gentleness. They're safer and easier on fences, equipment and people.

He wants it all.

Visit Hereford.org to hear Jess Herbers discuss the value of Hereford genetics in the Goose Creek Valley Farms commercial cow herd. The Montvale, Virginia, operation was nominated for BIF's 2015 Commercial Producer of the Year.

American Hereford Association
P.O. Box 014059 • Kansas City, MO 64101
816-842-3757 • Hereford.org
©2015 American Hereford Association

There's a reason a tried and true black baldie is the most favored cow in America's cow herd. She's accountable, predictable, profitable and sustainable. Her calf and her steer mates are in demand, regardless of end point.

The stakes have never been higher to create **value** and **efficiency** throughout the production system. In the past decade, Hereford has documented dramatic improvements in calving ease, weaning and yearling performance and end product merit.*

Reduce your risk. Improve your opportunity for profitability.

**You want it all in your beef operation?
Then take it.**

HEREFORDS. Accountable. Predictable. Profitable. Sustainable.

* The Spring 2015 Hereford Pan-American Cattle Evaluation (PACE) documents consistent improvements in all traits of economic importance. From 2004 to 2014, AHA Genetic Trends indicate a 14% reduction in birth weights, 20% improvement in weaning and yearling performance and a 30% improvement in end product merit. Hereford.org/userfiles/S15_Trend.pdf

- Two recent, large-scale research projects have documented the value of Hereford genetics in the commercial industry. Calves sired by Hereford bulls have a \$30 per head documented advantage in feedlot profitability and 7% advantage in fertility when compared to Angus-sired calves. This advantage was documented during a three-year, real-world commercial heterosis project comparing progeny by Hereford and Angus bulls when crossed on Angus-based cows. The study also documented a maternal advantage of 7% higher pregnancy rate when comparing the Hereford-sired females to Angus-sired females.
- Another project with Simplot Livestock Co. proved low birth weight Hereford bulls stacked up to Angus-heifer bulls in calving ease when bred to Angus first-calf heifers. This project will continue to follow the calves through weaning, finishing and harvest and track results of the Hereford-sired calves versus the Angus-sired calves.
- Using Hereford bulls on Angus-based cows will give producers advantages in profitability, cash flow, herd size, and retained female fertility and longevity according to a recently completed study at Circle A Angus Ranch. In fact, when the data was further analyzed for economic emphasis, the results showed an advantage of \$514 net per cow over a period of 10 years. That's a \$51 difference per cow per year.
- Economic models also predicted that if replacement females are retained over a period of 10 years, Hereford-sired females will generate a 20% advantage in herd size for the same relative cost versus the straight Angus commercial cows because of increased fertility and longevity period of 10 years. That's a \$51 difference per cow per year.

Fawcett's Elm Creek Ranch :: Yearling Hereford Bulls

The yearling bulls come predominately from the group of cows calving late January through mid March with the exception of the Denver pen bulls and a few others. These bulls have been on a high roughage ration at a low MCAL to ensure longevity. We want our bulls to be able to work hard and last years without any problems. You will find many 1/2 and 3/4 brothers in this offering to help you to have a consistent calf crop. Most all of the bulls in this group are the result of Artificial Insemination. Carcass data will be available on sale day. If there are any questions on pedigrees or any other information you are interested in please ask.

Fawcett's Elm Creek Ranch :: 2-year-old Hereford Bulls

We are really excited about this years group of two-year-old bulls. This group of bulls predominately come from the second group of cows calving from mid March through May. In this group of cows you will find calves sired by AI sires and the bulls resulting from embryo transplant. The quality has never been this good as you will find great bulls scattered throughout the offering out of proven cows and donors. This group of bulls leave the yards as soon as the grass has greened in the spring and are on their own until fall without supplement, and then are fed a high roughage ration out on pasture where they have room to travel. They are sound, hard in their condition and ready to work and last.

Fawcett's Elm Creek Ranch :: F1 Replacement Type Females

Selling on the sale are 80 F1 black baldy open yearling heifers. These heifers are the top cut and we feel they will be some of the elite to be offered anywhere in the country.

Heifers will be sold in lots of 10. High bidder has the right to take them all so don't wait to bid.

Yearling commercial and registered Hereford heifers are for sale privately. Let us know if you are looking for a few registered replacements or even a load of commercials as we have them both.

We have been offering our bred heifers for sale privately in the fall. If you have interest in these females and would like to be contacted next fall let us know.

In terms of that herd bull look, 2109 is the most impressive herd bull we have had at the ranch. He offers a bit more uniqueness in terms of muscle shape and power compared to his L1 counterparts. Whether he is used on virgin heifers or mature cows the results are the same, low birthweight and high weaning weight. He produces cattle with the maternal traits of the L1 influence that are wide constructed, big middled and heavy muscled. Not only is a powerful individual he is backed by a maternal great 759T who is a donor for the Cooper herd in Montana.

Yearling commercial and registered Hereford heifers are for sale privately. Let us know if you are looking for a few registered replacements or even a load of commercials as we have them both.

We have been offering our bred heifers for sale privately in the fall. If you have interest in these females and would like to be contacted next fall let us know.

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 15 traits and calculates four profit (\$) indexes. Research is ongoing to develop traits for fertility, feed intake and docility.

Today, DNA-marker tests can be used to enhance the accuracy of Hereford EPDs. AHA blends marker information with phenotypic information and pedigree to produce a GE-EPD. Look for the GE-EPD logo denoting an animal has been tested.

The current suite of Hereford EPDs and \$ indexes includes:

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Maternal Milk (MM)

The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. An example of how the MCW EPD allows breeders to compare sires: If sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

Udder Suspension (UDDR)

Scores range from 9 (very tight) to 1 (very pendulous) and represent assessments of udder support. Weak udder suspension results in pendulous udders that make it difficult for a calf to nurse. Weak suspension in the udder indicates a lack of support in the ligament that ties the udder to the cow's body wall. Over time, weakness in this ligament will allow the udder to hang down too far from the body and may subject the udder to serious problems and increased potential for injury.

UDDR EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat Size (TEAT)

Scores range from 9 (very small) to 1 (very large, balloon shaped) and are subjective assessments of the teat length and circumference. Oversized teats are difficult for newborn calves to nurse, and the calf may not receive adequate colostrum. This could lead to a higher incidence of scours or decreased immunity levels in the newborn calf.

TEAT EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm. In the Hereford genetic analysis, a multiple-trait model was used for scrotal circumference. Weaning weight was used as a predictor variable to increase the prediction accuracy of SC EPDs. Therefore, an animal with a weaning weight EPD should also have a SC EPD."

Sustained Cow Fertility (SCF)

The AHA's new Sustained Cow Fertility EPD (SCF) is a prediction of a cow's ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving's to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Dry Matter Intake

The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Carcass Weight (CW)

Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMIS)

The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS)

The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHBS)

The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.
